

IMO® Webinar Series: Diagnosis Terminology Made Easy

HOW TO ENHANCE YOUR COMPETITIVE ADVANTAGE THROUGH PHYSICIAN SATISFACTION AND IMPROVED WORKFLOW

We will discuss how our Problem IT™ terminology can significantly enhance charge capture, coding compliance, and capture clinician intent.

By implementing Problem IT™ within your EMR, physicians will save time and money, and realize quicker ROI due to reduced denials.

*“Installing IMO® was the single, most important improvement we have made to our EHR system.”**

The burden of managing ICD-9-CM codes or the worry about the upcoming ICD-10-CM release is a thing of the past. Focus on your core business, and allow us to focus on ours. Register today! Space is limited!

** Dr. Adam Cheriff, Chief Medical Information Officer
Weill Medical College, Cornell University*

IMO® began operations in 1994, with the creation of one of the first EMRs, initially called Intelligent Medical Record. The EMR was acquired by Glaxo Wellcome and marketed under the name Healthpoint ACS, later obtained by A4 Health Systems which was later acquired by Allscripts. Following its EMR development, IMO® realized that structured interface terminology was critical to EMRs, the longitudinal care record, and key to semantic interoperability. The IMO® Personal Health Terminology was launched in 1995 and formed the foundation for today's Clinical Interface Terminology family that includes terminology domains in problems and diagnoses, procedures, medications and medical necessity.
